Milestone 7: Final Presentation

1. Final Project Presentation

1. General requirements:

1. The duration the presentation should be about 12 minutes. Total time allowed between start of one presentation and the start of the next: 20 minutes.
2. Every member of the team must be present for the presentation and also participate by presenting some part of the presentation.
3. Dress appropriately.
4. Prepare a professional presentation. You may wish to use PowerPoint or other similar tools. Practice your presentation at least once.
5. Your presentation will be evaluated by your classmates attending your presentation. The instructors will provide the evaluation criteria.

2. Content:

1. Remember that your audience is familiar with computer architecture design principles and with the project specifications. Keep this in mind when deciding what to include in your presentation.
2. Highlight the unique aspects of your design.
3. Discuss changes that you would like to make to your design.
4. Discuss the aspects of the design that your team found most challenging and interesting.
5. Present the performance data collected in Milestone 6. Ensure that your project is implemented targeting the Spartan3E family, device xc3s500e, package fg320, speed grade -4 before you collect the performance data.
6. Discuss any unique problems and adventures with Xilinx.

A copy of your presentation materials should be placed in the `FinalPresentation` directory of your team's repository.
